ALUMINUM BASEBOARD

If the installation is done poorly, no matter how beautiful the coating is, the final finish is disastrous and the investment made is worthless.

CREAPRAC was born in 1989 offering products to facilitate the installation of ceramic, porcelain and stone coatings with the aim of achieving impeccable and durable installations.

Over the years, products have been incorporated to achieve the same objective for other projects, such as: products for cable management, plastic tapes to cover steel mesh fences, glass mosaics to decorate and decorate spaces, borders to give life and highlight the wall tiles, mirrors to decorate and beautify bathrooms, glass blocks to isolate spaces, and many more innovative products.

Our company has a factory with 5 plastic extrusion lines, located in Guadalupe, Nuevo Leon, Mexico, and 2 sales warehouses located in Monterrey and Mexico City.

Our marketing system is through distributors, mainly hardware stores and flooring and tile stores, so you can find our products throughout Mexico.

Thanks to the quality of our products, for several years we have successfully exported to various destinations, including Central America, the Caribbean, South America, and the United States of America.

To offer a better service to our clients in the United States of America, we have a sales warehouse in San Diego, California.

We invite you to review this catalog where you will find the details of all our products, and if you have questions about any of them, or want the name of the distributor that we have in your city where you can buy them, contact us by phone or send us an email with your question, and we will gladly assist you.

For SINGLE USE,
Recycle after use

Part 3

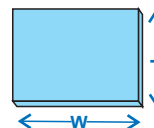

Adjustment Tool

For MULTIPLE USES

How many pieces do you need?

Number of clips required per 100 ft²

Pieces x ft²

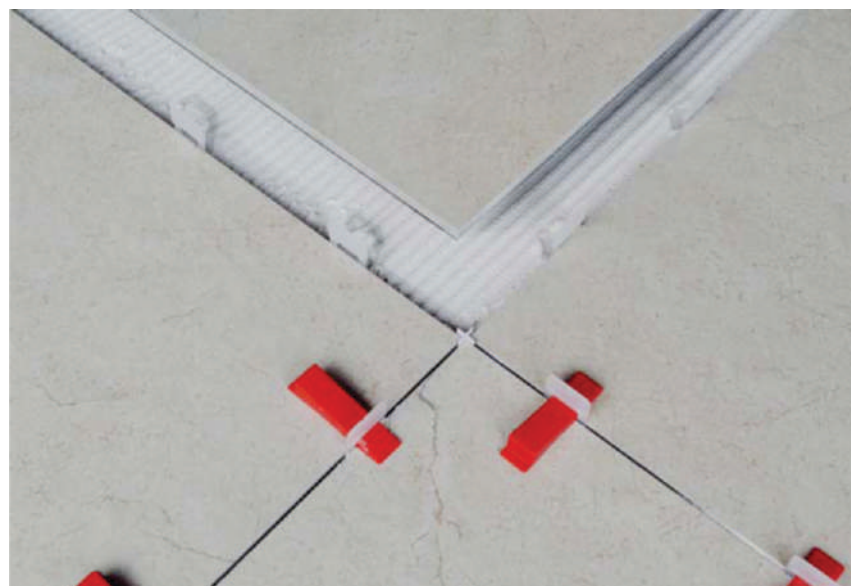

Clip to Wedge Relation: 1:3

Example
Side W (24 in) x Side L (24 in)

Tile Width (in inches)

TILE LEVELING INSTRUCTIONS

1. After having spread the adhesive, insert the clip underneath the tiles and along the 4 sides.
2. According to the tile size, set one or more clips on every side of the tile.
3. Set the tile and beat it with a rubber mallet.
4. Insert the wedge in the clip slot, paying attention not to pass the breakpoint.
5. To facilitate this operation, the use of the traction-adjustable pliers is recommended.
6. Once the adhesive is set, the protruding part of the support has to be separated from the base, which is embedded beneath the tile edge. This can be done using a rubber mallet or even feet. Beat parallel to the joint.
